

# NTS & NTU Series

## Installation manual

*True Sine Wave Inverter*

• High Reliable Inverter •

NTS/NTU series are MEAN WELL's new generation high-reliability off-grid DC-AC pure sine wave inverters. The whole family has NTS-250P/400P, NTS-300/450/750/1200/1700/2200/3200, and NTU-1200/1700/2200/3200 series . The whole family of NTS/NTU are fully digital designed, with three major characteristics of miniaturization, high efficiency, and intelligence. The main features are, instantaneous peak load capacity which can reach up to 2 times of output wattage, as well as AC output voltage/frequency/power saving mode adjustment capability through the DIP switch of front panel (the idle standby consumption is 1.5W). It's efficiency reaches up to 93%, and it can be operated within temperature range from -25~+70°C. Built-in remote control, able to monitor the battery voltage and the load status of the inverter through IRC1/2/3. Not only intergrated multiple intelligent protections, but also passed safety regulations such as CB/DEKRA/E13/EAC/UL/RCM/FCC/CE/UKCA. Materials and components are strictly selected and 3-year warranty is provided. It is suitable for households, vehicles, yacht and remote areas without power grids. Common application such as, lighting, air conditioning, refrigerators, hair dryers, microwave ovens , computers, televisions, hand-held power tools, motor equipment, mobile AC power... etc.

## 1.Safety Guidelines

- Risk of electrical shock and energy hazard. All failures should be examined by the qualified technician. Please do not remove the case of the inverter by yourself.
- Please do not install the inverter in places with high moisture or near water.
- Please do not install the inverter in places with high ambient temperature or under direct sunlight.
- Please only connect batteries with the same brand and model number in one battery bank. Using batteries from different manufacturers or different capacity is strictly prohibited!
- Never allow a spark or flame in the vicinity of the batteries because they may ignite explosive gases during normal operation.
- Make sure the air flow from the fan is not obstructed at both sides (front and back) of the inverter. (Please allow at least 15cm of space)
- Please do not stack any object on the inverter.
- Please do not turn on the inverter before start the engine if inverter connected to vehicle's battery directly.
- Branch rated over current protection for the AC output circuit is to be provided at the time of installation.
  
- Risque de choc électrique et danger d'électrocution. Toutes les pannes doivent être examinées par un technicien qualifié. Veuillez ne pas retirer vous-même le boîtier de l'onduleur.
- N'installez pas l'onduleur dans des endroits très humides ou à proximité d'eau.
- N'installez l'onduleur dans des endroits où la température ambiante est élevée ou sous la lumière directe du soleil.
- Veuillez ne insérer que des batteries de la même marque et du même modèle dans un seul banc de batteries. L'utilisation de batteries de fabricants différents ou de capacités différentes est strictement interdite!
- Ne laissez jamais une étincelle ou une flamme à proximité des batteries car elles peuvent enflammer des gaz explosifs lors du fonctionnement normal.
- Assurez-vous que le flux d'air du ventilateur n'est pas obstrué des deux côtés (avant et arrière) de l'onduleur. (Veuillez laisser au moins 15 cm d'espace)
- N'empilez aucun objet sur l'onduleur.
- N'allumez pas l'onduleur avant de démarrer le moteur si l'onduleur est connecté directement à la batterie du véhicule.
- Une protection contre les surintensités nominales de dérivation pour le circuit de sortie AC doit être fournie au moment de l'installation.

## 2.Introduction

### 2.1 Model number

### 2.2 Features

- Full digital design with compact size and light weight.
- True sine wave output(THD<3%)
- Peak power up to 1.7~ 2 times
- AC voltage, frequency, power saving mode selectable.
- Multiple intelligent protections
  - DC Input : Reverse polarity protection/ Low DC voltage protection/ DC over voltage protection.
  - AC Output : Short circuit protection, over load protection, over temperature protection.
- LED indicator : Status, DC input, load status, AC input.
- Built-in Remote control
- Support IRC1/2/3 for 750~3200W models(optional)
- UPS functions( only for NTU series)
- Wide range of DC input voltage for lead acid or lithium batteries.
- CB/DEKRA/E13/EAC/UL/RCM/FCC/CE/UKCA certified.
- 3 year warranty

## 2.3 Specification

### NTS-250P series

MODEL	NTS-250P-112	NTS-250P-124	NTS-250P-148	NTS-250P-212	NTS-250P-224	NTS-250P-248	
OUTPUT	RATED POWER(Continuous)	250W					
	OVER RATED POWER(3 Min.)	287.5W					
	PEAK POWER(10 Sec.)	375W					
	SURGE POWER(30 Cycles)	500W					
	AC VOLTAGE	Default setting set at 110VAC	Default setting set at 230VAC				
		100 / 110 / 115 / 120Vac selectable by DIP S.W	200 / 220 / 230 / 240Vac selectable by DIP S.W				
	FREQUENCY	Default setting set at 60Hz±0.1Hz	Default setting set at 50Hz±0.1Hz				
		50/60Hz selectable by DIP S.W	50/60Hz selectable by DIP S.W

	AC OUTPUT	OVER TEMPERATURE	Protection type : Shut down o/p voltage, re-power on to recover											
		OUTPUT SHORT	Protection type : Shut down o/p voltage, re-power on to recover											
FUNCTION		OVER LOAD (Typ.)	105 ~ 115% load for 180 sec., 115% ~ 150% load for 10 sec.											
		CIRCUIT BREAKER	Protection type : Shut down o/p voltage, re-power on to recover											
		GFCI PROCTECTION	UL458 (Only for "GFCI" AC socket) None											
		REMOTE CONTROL	Power ON-OFF remote control by front panel dry contact connector (by RELAY) Open : Normal work ; Short : Remote off											
		CONNECTOR	Remote controller sold separately, Order No.: IRC1,IRC2,IRC3											
ENVIRON-MENT		RS-232 COMMUNICATION	RS-232 ~ RJ11 Type connector											
		AC INPUT RANGE	100/110/115/120Vac±16%, recover±13%				200/220/230/240Vac±16%, recover±13%							
		FREQUENCY RANGE	45 ~ 65Hz											
		TRASFER TIME (Typ.)	10ms inverter → AC by pass											
OTHER		WORK TEMP.	-25 ~ +70°C (Refer to "Derating curve")											
		WORKING HUMIDITY	20 ~ 90% RH non-condensing											
		STORAGE TEMP., HUMIDITY	-30 ~ +70°C / -22 ~ +158°F, 10 ~ 95% RH non-condensing											
		VIBRATION	10 ~ 500Hz, 3G 10min./1cycle, 60min. each along X, Y, Z axes											
OTHER		MTBF	166.3K hrs min. Telcordia TR/SR-332 (Bellcore); 58.3K hrs min. MIL-HDBK-217F (25°C)											
		DIMENSION	333*184*70mm (L*W*H)											
		PACKING	3.3Kg; 2pcs/ 7.6Kg/ 1.16CUFT											

## NTU-1700 series(Built-in UPS function)

MODEL		NTU-1700-112	NTU-1700-124	NTU-1700-148	NTU-1700-212	NTU-1700-224	NTU-1700-248			
		□ = US, GFCI, UN				□ = EU, CN, AU, UK, UN				
OUTPUT	RATED POWER(Continuous)	1500W				1700W				
	OVER RATED POWER(3 Min.)	1750W				2000W				
	PEAK POWER(10 Sec.)	2250W				2550W				
	SURGE POWER(30 Cycles)	3000W				3400W				
	AC VOLTAGE	Default setting set at 110VAC				Default setting set at 230VAC				
		100 / 110 / 115 / 120Vac selectable by DIP S.W				200 / 220 / 230 / 240Vac selectable by DIP S.W

## 3. Installation & Wiring

### 3.1 Precautions

- The unit should be mounted on a flat surface or holding rack with suitable strength.
- In order to ensure the lifespan of the unit, you should refrain from operating the unit in environment of high dust or moisture.
- NTS-450~3200/NTU-1200~3200 are design with built-in DC fan. Please make sure the ventilation is not blocked. We recommend that there should be no barriers within 15cm of the ventilating slits, which is shown as follow.

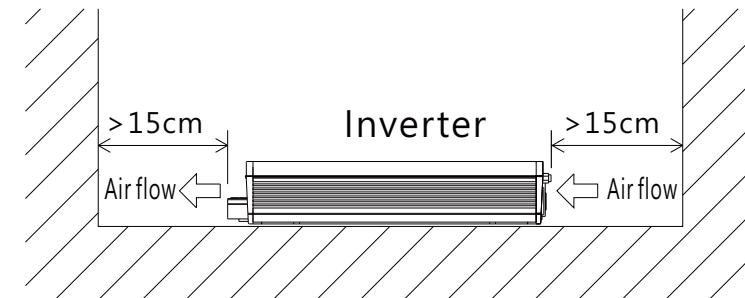

Figure 3-1 set-up recommendation

### 3.2 System Block Diagram

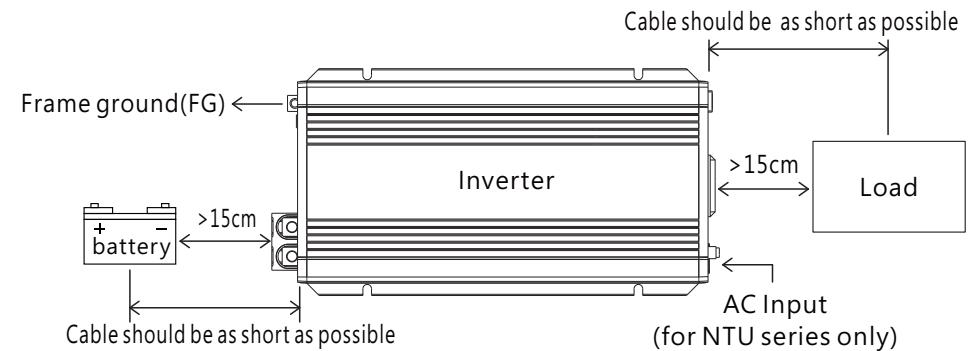

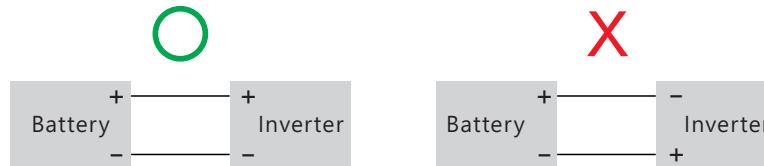

Figure 3-2 System Block Diagram

### 3.3 Installation procedures

- ① Please turn off the inverter first.
- ② Select proper cable for connection between battery and inverter by referring to section 3.4
- ③ Connect the positive polarity of battery to the positive terminal of inverter, and connect the negative polarity of battery to the negative terminal of inverter.

- ④ Turn the power switch to "ON" position, as soon as it shows green in status's LED, then it's ready.

### 3.4 Cable selection

Wire connections should be as short as possible and less than 1.5 meter is highly recommended. Make sure that suitable wires are chosen based on safety requirement and rating of current. Small cross section will result in lower efficiency, less output power and the wires may also become overheated and cause danger. Please refer to table 3-1.

Rated current(A)	Cross section( $\text{mm}^2$ )	AWG
10A ~ 13A	1.25	16
13A ~ 16A	1.5	14
16A ~ 25A	2.5	12
25A ~ 32A	4	10
32A ~ 40A	6	8
40A ~ 63A	10	6
63A ~ 80A	16	4
80A ~ 100A	25	2
100A ~ 125A	35	1
125A ~ 160A	50	0

Table 3-1 Cable recommendation

### 3.5 Battery selection

Battery types : Lead acid or lithium ion batteries

Voltage range : 10~16.5Vdc (12V), 20~33Vdc (24V), 40~66Vdc (48V)

Battery capacity : Please refer to the following table.

Model/Output	112	212	124	224	148	248
NTS-250P	85Ah or above	45Ah or above	25Ah or above			
NTS-300	100Ah or above	50Ah or above	30Ah or above			
NTS-400P	150Ah or above	70Ah or above	35Ah or above			
NTS-450	170Ah or above	85Ah or above	45Ah or above			
NTS-750	250Ah or above	130Ah or above	65Ah or above			
NTS/NTU-1200	400Ah or above	200Ah or above	100Ah or above			
NTS/NTU-1700	500Ah or above	250Ah or above	125Ah or above			
NTS/NTU-2200	735Ah or above	370Ah or above	185Ah or above			
NTS/NTU-3200	1000Ah or above	500Ah or above	250Ah or above			

### 3.6 GFCI socket

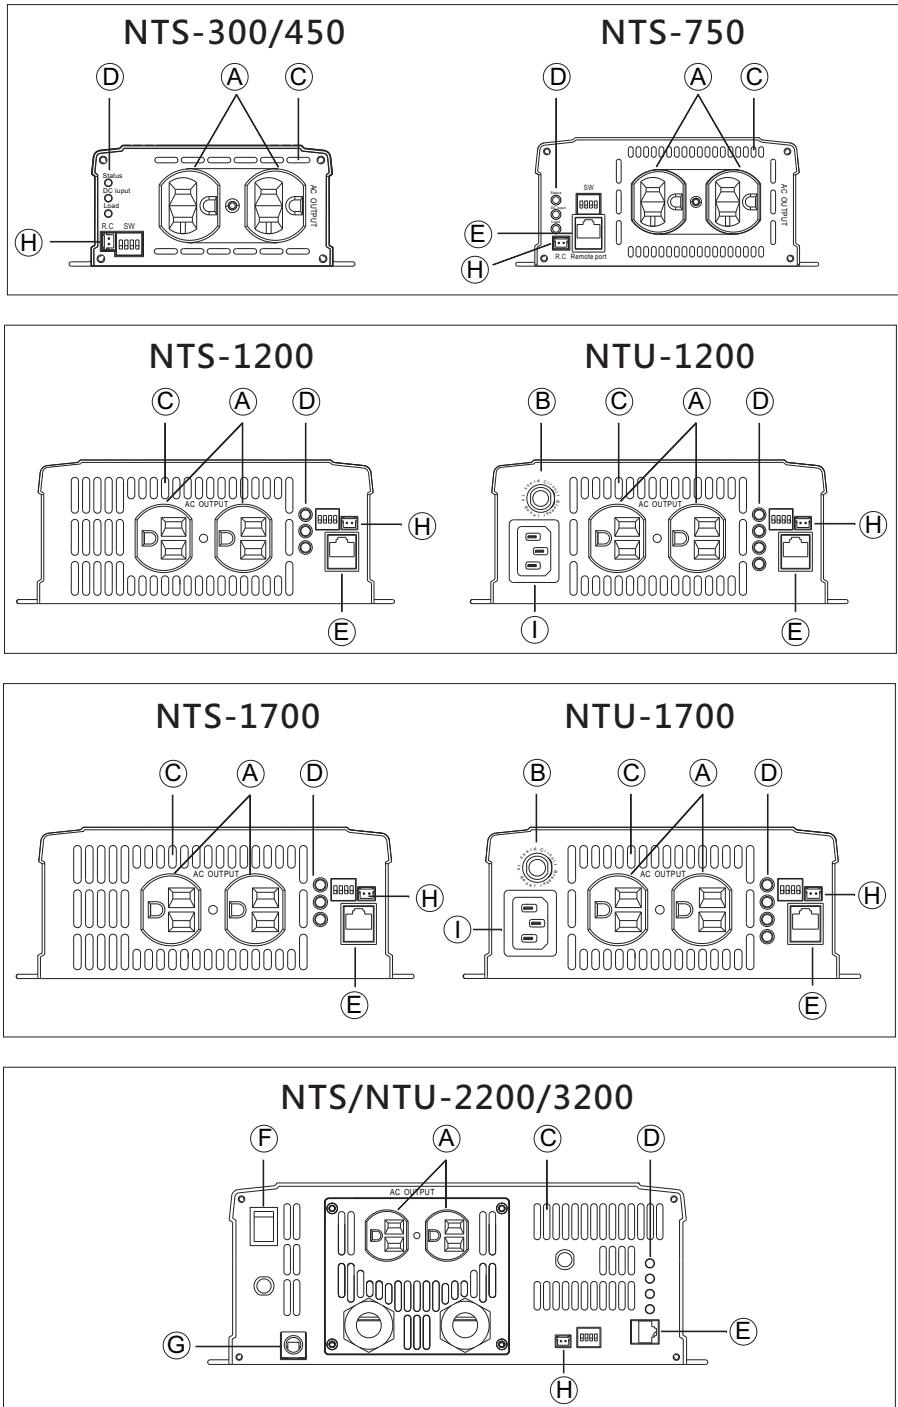

To meet the requirements of UL458, external GFCI socket is required for use, the following GFCI socket models are recommended(for NTU/S-2200/3200-1XXTB UL458 type):

Manufacturer	Model No.
Eaton	SGF20

## 4. User Interface

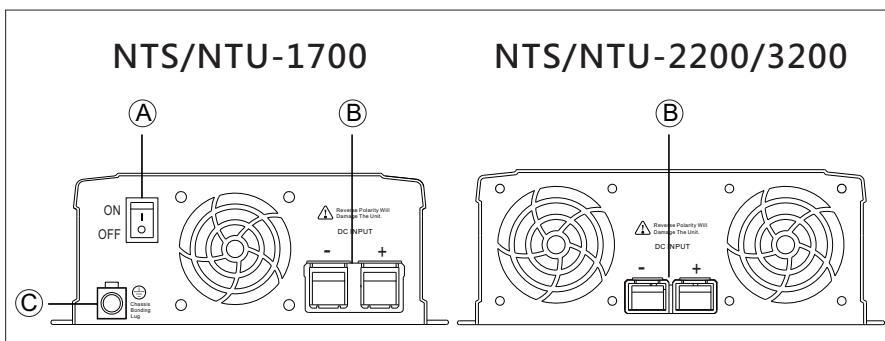

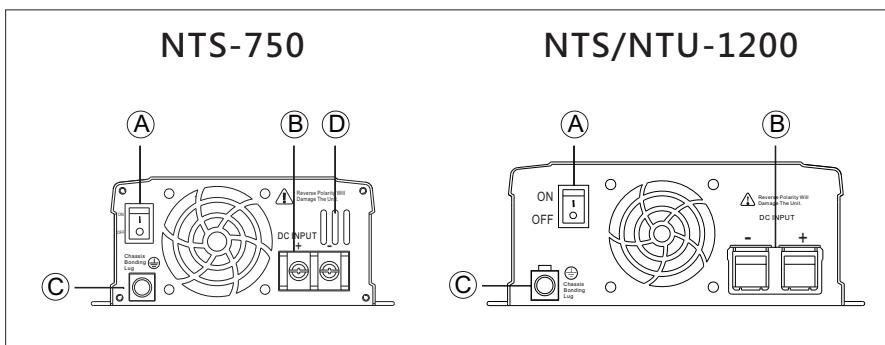

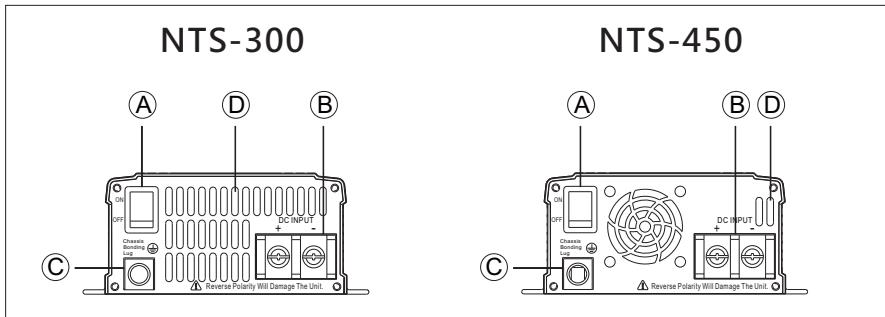

### 4.1 AC panel

- (A) **AC output socket**: Please refer to Pg. 16 for varies socket for different regions.
- (B) **No fuse breaker with reset button (only for NTU-1200/1700/2200/3200 GFCI series; NTU-1200/1700/2200/3200 series)**:  
Under "bypass mode", when the AC output is shorted or the load current exceeds the rated current of the No fuse breaker, the breaker will trip and that stops bypassing energy for the utility thus prevent possible danger. When the abnormal condition is cleared, the user can press down on the reset button to resume operation.
- (C) **Ventilation slits**: The inverter requires good ventilation for proper operation and prolonging its lifetime.
- (D) **LED indicators**: Indicate the status of inverter and the load condition.
- (E) **Communication port**: For remote monitoring purpose, the unit can be connected to a PC through this communication port by using the or a cable and monitoring software. Also for remote control purpose, the unit can be connected to the IRC module through this port.
- (F) **Power ON/OFF switch**: The inverter will turn ON if the switch is in the ON position, and vice versa.
- (G) **FG connection**
- (H) **Remote ON/OFF**: Inverter will turn on if the pins of RC connector is open. And, inverter will turn off if the pins are shorted.
- (I) **AC bypass socket**: When AC mains is available, by connecting the AC mains to the AC socket, it will enable AC bypass function, which the Energy will provide to load from AC mains directly. Please use UL Listed power supply cord, 14AWG/3C, Type SJ/SJT/SJO/SPT-3, terminates in a grounding type 3 prong molded-on attachment plug (NEMA 5-20P). Maximum 0.9 m long.

## 4.2 DC input panel

- (A) POWER ON/OFF switch: The inverter will turn ON if the switch is in the ON position, and vice versa.
- (B) Input terminals (+), (-)
- (C) Frame ground (FG)
- (D) Ventilation slits: The inverter requires suitable ventilation to work properly. Please make sure there is good ventilation and the lifespan of the inverter can be preserved.

## 4.3 LED Indicator

Status indicator :

The LED is used to indicate the status of inverter, including inverter OK, remote on/off and power saving mode.

Status	Green	Orange	Red
	System check Inverter OK	Remote off Saving mode	Abnormal Status (See below table)

DC Input Indicator :

It is used to show the input status of inverter.

Green light :

When input voltage is greater than 12.5V(12V)/25V(24V) 50V(48V).

Orange light :

When input voltage is within 11V~12.5V(12V)/22V~25V(24V)/44V~50V(48V).

Red light :

When input voltage is lower than 11V(12V)/22V(24V)/44V(48V) or over its specification. It flashes and warning sound will be activated.

DC Input	Green	Orange	Red
	12.5~15.5Vdc 25~31Vdc 50~62Vdc	11~12.5Vdc 22~25Vdc 44~50Vdc	<11Vdc or >15.5Vdc <22Vdc or >31Vdc <44Vdc or >62Vdc

Load Condition Indicator :

It represents the magnitude of output loads

Green light : When load is lesser than 40%.

Orange light : When load is between 40%~80%.

Red light : When load is greater than 80%.

Load	Input mode	Green	Orange	Red
	Mains priority	● <40% load	● 40~80% load	● >80% load
Battery Priority	● <40% load	● 40~80% load	● >80% load	● >80% load

**AC Input Indicator :**

Represents the magnitude of AC main.

**Green light :**

When AC mains is connected and the voltage is present normally.

**Flash in green light :**

When the mains is connected but the voltage exceeds  $\pm 10\%$  of the rated voltage, the green light will start flashing for warning.

**Light off :**

when the mains is disconnected or not connected, LED will be in off.

AC Input	Green

## 5.Explanation of Operation

### 5.1 Procedure of setting Operating Mode, Output Voltage, Frequency, and Saving Mode

#### 5.1.1 Output Voltage and Frequency Setting

Factory settings are either 110Vac/60Hz or 230Vac/50Hz, users are able to adjust the voltage and frequency, through the DIP switch of position 1,2,3,4 on the AC panel.

Type-US

AC Output Voltage, Frequency, Power Saving Mode, Selectable by DIP SW			
SW1	SW2	SW3	SW4
OFF	OFF : 100Vac or 200Vac	ON : 50Hz	ON : Power saving mode
OFF	ON : 110Vac or 220Vac		
ON	OFF : 115Vac or 230Vac	OFF: 60Hz	OFF: Non-power saving mode
ON	ON : 120Vac or 240Vac		

#### 5.1.2 Power Saving Mode setting

When the inverter is in no load status, in order to reduce battery energy consumption by inverter accidentally, Position 4 of DIP S.W. on the panel of inverter, can be adjusted to the "ON" position. When this mode is activated, if the load is less than 10W, the inverter will turn off the output and enter the power saving mode after 3 second. In the power saving mode, the inverter MCU will periodically detect the output load status. When a load greater than 25W is connected, the inverter will switch back to normal mode and start output again. (Non-power saving mode is used as factory setting).

NOTE: Fan stops at power saving mode.

#### 5.1.3 Remote ON/OFF

R.C Switch	
Open	Normal work
Short	Remote off

### 5.1.4 Battery /Mains Priority Setting

NTS-1700 is factory set to mains priority, if you want to set battery priority, you need to switch the DIP of battery preference in the remote off state, the procedure is as follows:

- ① When the power is not being sent, turn the 2 and 3 DIP switches of the selected DIP\_SW to the "OFF" state
- ② BAT power supply in remote off mode
- ③ Within 15 seconds of power transmission, switch 2 and 3 of the DIP\_SW to full "ON", and then switch back to full "OFF"
- ④ All LEDs (except AC input) flash green 3 times, indicating that the setting is successful
- ⑤ Turn off NTU and turn on the external Remote switch
- ⑥ Turn on NTU to load battery priority mode

To turn off the battery priority setting, follow these steps:

- ① When the power is not being sent, turn the 2 and 3 DIP switches of the selected DIP\_SW to the "ON" state
- ② BAT power supply in remote off mode
- ③ Within 15 seconds of power transmission, switch the 2 and 3 switches of the DIP\_SW to full "OFF", and then switch back to full "ON"
- ④ All LEDs (except AC input) flash green 3 times, indicating that the setting is successful
- ⑤ Turn off NTU and turn on the external Remote switch
- ⑥ Turn on NTU to load the AC priority function

### 5.2 Function Difference

Function/model	NTS-250P/400P	NTS-300/450	NTS-750/1200/1700/2200/3200	NTU-1200/1700/2200/3200
Support IRC	X	X	●	●
Support RS-232	X	X	●	●
Support UART	●	X	X	X
UPS Function	X	X	X	●
Battery priority	X	X	X	●

● Standard

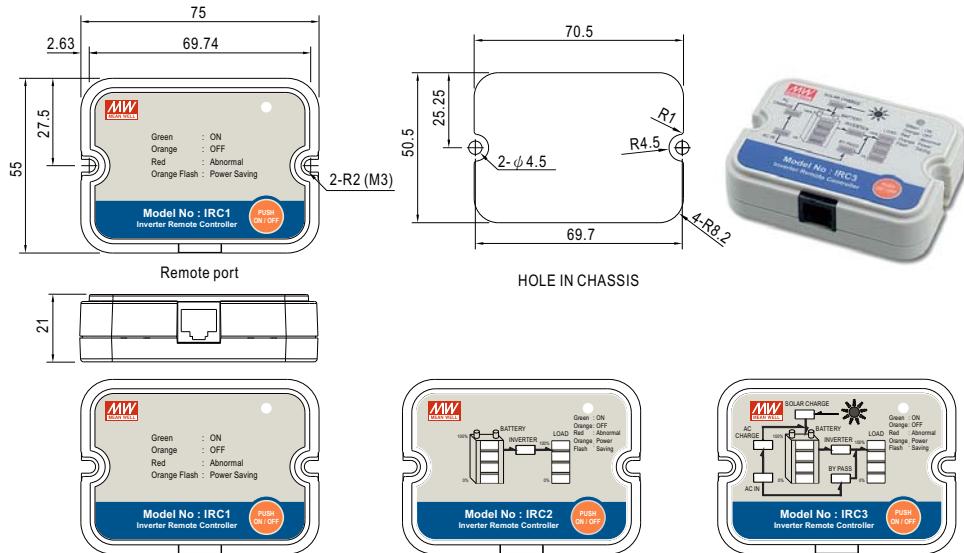

NOTE: Built-in thermal controlled DC fan. Fan stops at low internal temperature.

### 5.3 IRC1/IRC2/IRC3 Remote Control Unit

- IRC1/IRC2/IRC3 is the monitoring and control unit used for the inverter series.
- IRC1/IRC2/IRC3 can decode the RS-232 signals sent by the inverter series and display through digital meters.

Note: Part of the control signals will not function properly due to different compliance of each model.

MODEL	IRC1	IRC2	IRC3
OUTPUT	DIGITAL METER	----	Display the battery level, output load level, and operating status of inverter unit
	CONTROL OUTPUT	Remote ON/OFF for inverter unit	
	LED INDICATOR	Remote turn ON(Green) ; Remote turn Off(Orange) ; Abnormal (Red) ; Saving mode (Orange flash)	
FUNCTION	REMOTE ON/OFF CONTROL	The controlled inverter unit can be turned ON/OFF on the remote control panel for IRC1 / IRC2 / IRC3	
	POWER SAVING CONTROL	Power saving enable / disable activation	
ENVIRONMENT	SUITABLE SERIES	TS-700 / 1000 / 1500 / 3000 TN-1500 / 3000 NTS-750 / 1200 / 1700 / 2200 / 3200 NTU-1200 / 1700 / 2200 / 3200	TS-700 / 1000 / 1500 / 3000 NTS-750 / 1200 / 1700 / 2200 / 3200 NTU-1200 / 1700 / 2200 / 3200 TN-1500 / 3000 NTS-750 / 1200 / 1700 / 2200 / 3200 NTU-1200 / 1700 / 2200 / 3200

## 5.4 RS-232/UART Protocol

RS-232/UART communication can be used between NTS/NTU series products and external controller (Controller) or PC software. The internal data of a single NTS/NTU unit can be read through RS-232 or UART, but multiple units on a bus is not allowed.

The RS-232/UART parameters of NTS/NTU series are defined as follows:

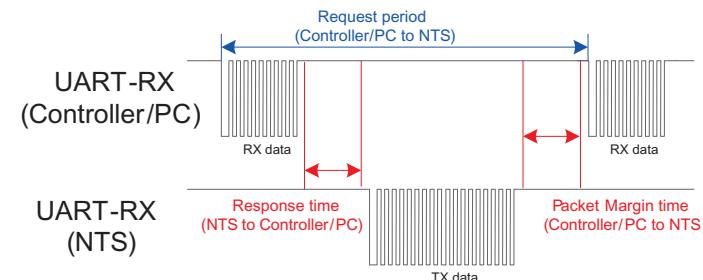

Parameter	Setting
Baud Rate	9600
Data Bits	8
Stop Bit	1
Parity	None
Flow Control	None

Definition of MEAN WELL RS-232 protocol:

Command Code	Type	Command name
Q	R	Status Inquiry
C	W	Remote Control
V	R/W	Write voltage/Frequency Write: Need to enable with "pU" command first
pU	W	Enable/disable setting mode (for command "V")
I	R	INVERTER Information
W	W	Write Information into INVERTER EEPROM
U	R/W	Write UVP Transfer voltage · OVP Transfer voltage

### Communication sequence

- Min. request period (Controller/PC to NTU/NTS): 500mSec.
- Max. response time (NTU/NTS to Controller/PC): 15mSec.
- Min. packet margin time (Controller/PC to NTU/NTS): 10mSec.

The write format and reply format of communication protocol

NTS/NTU communications are transmitted by using ASCCALL codes. The end character of communication command is CR(0x0D), also CRLF (0x0A) is the most common end character. Therefore, when decoding data, pay attention to whether LF (0x0A) is included and clear it to avoid data confusion. To improve transmission quality, some commands contain Checksum.

The Checksum is calculated as follows:

- ① Reset the Checksum in the Checksum data to zero.
- ② Add all the data before Checksum data, Including V or I commands.
- ③ If the total data is less than 2 bytes, add 0 to make up 2 bytes.

For example, the V command sets the inverter output to 110VAC/50Hz. The format of the V instruction is as follows :

0	1-3	4	5-7	8-9	10
V(0x56)	Voltage	SP(0x20)	Frequency	Checksum	CR(0x0D)

Fill in the instructions in the above format and the instruction data except checksum is as follows:

V(0x56)	1(0x31)	1(0x31)	0(0x30)	SP(0x20)	0(0x30)	5(0x35)	0(0x30)	checksum	CR(0x0D)
---------	---------	---------	---------	----------	---------	---------	---------	----------	----------

① Reset the Checksum data to zero

② The checksum data is the sum of all written data

$$\text{Sum} = 56 + 31 + 31 + 30 + 20 + 30 + 35 + 30 = 19D$$

③ Checksum = 01 9D

The format of the V command is as follows:

V(0x56)	1(0x31)	1(0x31)	0(0x30)	SP(0x20)	0(0x30)	5(0x35)	0(0x30)	<b>0x019D</b>	CR(0x0D)
---------	---------	---------	---------	----------	---------	---------	---------	---------------	----------

Note: For details about the format of the V command, see the following write / read format and definition description.

The Q command: Used to confirm the inverter status, the parameters can be output voltage, output load percent (Digital), battery voltage, battery capacity, heat sink temperature, utility power voltage, output power frequency, DC bus, output load percent ( Analog ) and etc.

Write format:

0	1

2	Checksum	Checksum				

- ① The read value can be any arbitrary code, the BYTE length must be met when writing data, and the value can be arbitrary.
- ② If the related parameters are unsupported · please set the maximum voltage when writing :  
 12V: 15.0V (0x31 0x35 0x2E 0X30)  
 24V: 30.0V (0x33 0x30 0x2E 0x30)  
 48V: 60.0V (0x36 0x30 0x2E 0x30)
- ③ The battery voltage setting must meet the following conditions:  $12.5V \geqslant \text{Alarm\_Volt.} > \text{Shutdown\_Volt.} \geqslant 9.7V$ . And  $\text{Alarm\_Volt.} - \text{Shutdown\_Volt.} \geqslant 0.2V$ . If the above conditions are not met, the setting is invalid.
- ④ If the data cannot fill the number of bytes set by the instruction ,please write in blank code(0x20) after the write data. For example, the manufacturer "MEANWELL" has 8 bits, and 2 bits need to be added. The ASCII code is:  

M(0x4D)	E(0x45)	A(0x41)	N(0x4E)	W(0x57)	E(0x45)	L(0x4C)	0(0x20)	0(0x20)
---------	---------	---------	---------	---------	---------	---------	---------	---------

U Command: Used for battery undervoltage conversion voltage setting and battery overvoltage conversion voltage setting in battery priority mode, only applicable to NTU models.

Write format :

0	1 ~ 4	5	6 ~ 9	10	11~14	15	16~19
#(0x55)	UVP Transfer Voltage	SP(0x20)	OVP Transfer voltage	SP(0x20)	V1	SP(0x20)	V2
20	21~24	25	26~29	30 31	32		
SP(0x20)	V3	SP(0x20)	V4	Checksum	CR(0x0D)		

Note: V1, V2, V3, and V4 are reserved parameters, all of which are 4 bytes, and the content is a fixed value: 0x30 0x30 0x2E 0x30.

Reply format :

If the Controller/PC transmits the setting parameters correctly, NTU replies:

0	1 ~ 4	5	6 ~ 9	10	11~14	15	16~19
#(0x23)	UVP Transfer Voltage	SP(0x20)	OVP Transfer voltage	SP(0x20)	V1	SP(0x20)	V2
20	21~24	25	26~29	30 31	32		
SP(0x20)	V3	SP(0x20)	V4	Checksum	CR(0x0D)		

If the Controller/PC transmission setting parameters are incorrect, NTU will reply: Please confirm and retransmit.

0	1	2	3	4	5	6	7	8
#(0x23)	U(0x55)	SP(0x20)	C(0x43)	M(0x4D)	D(0x44)	SP(0x20)	E(0x43)	R(0x52)
9	10	11	12 ~13	14				
R(0x52)	O(0x4F)	R(0x52)	Checksum	CR(0x0D)				

Definition of command ( U ) :

Data byte	Funtion name	Description	R/W	Range	Data	Uint
4	UVP Transfer Voltage	Battery Priority Mode: Battery undervoltage conversion voltage setting <b>(Note 1)</b>	W/R	12:9.9~12.5Vdc 24:19.8~25.0Vdc 48:39.6~50.0Vdc Default: 12: 11Vdc 24: 22Vdc 48: 44Vdc <b>(Note 2)</b>	U1	ASCII
4	OVP Transfer Voltage	Battery Priority Mode: Battery overvoltage conversion voltage setting <b>(Note 1)</b>	W/R	12:10.5~15.5Vdc 24:21.0~32.0Vdc 48:42.0~64.0Vdc Default: 12: 14.4Vdc 24: 28.8Vdc 48: 57.6Vdc <b>(Note 2)</b>	U1	ASCII
4	V1	Preserved	W/R	Fixed 0x30 0x30 0x2E 0x30	U1	ASCII
4	V2	Preserved	W/R	Fixed 0x30 0x30 0x2E 0x30	U1	ASCII
4	V3	Preserved	W/R	Fixed 0x30 0x30 0x2E 0x30	U1	ASCII
4	V4	Preserved	W/R	Fixed 0x30 0x30 0x2E 0x30	U1	ASCII
4	Checksum	The sum of the data contents (Not included Checksum)			U1	ASCII

Note:

1 In battery priority mode, the premise of triggering OVP is to trigger UVp, and after the battery voltage reaches the UVp conversion point, it switches to AC to power supply and charges the battery. After the battery voltage reaches the OVP conversion point, it switches to DC power supply and is discharged by the battery. ( In the battery priority mode, the battery voltage is lower than the set battery undervoltage conversion voltage, and the power supply is switched to AC. Wait until the battery voltage reaches the set battery overvoltage conversion voltage, and then switch back to DC mode. )

2 The battery voltage setting must meet the following conditions (for example, the 12V model) :  $9.9 \leq UVP \text{ Transfer Voltage} \leq 12.5$  .  
 $10.5 \leq OVP \text{ Transfer voltage} \leq 15.5$  · OVP Transfer voltage - UVP Transfer Voltage  $> 0.2$ . If the above conditions are not met, the setting will be invalid.

When the Shutdown Volt  $\geq$  UVP Transfer Voltage in the W command, the UVP Transfer Voltage setting value is as follows:

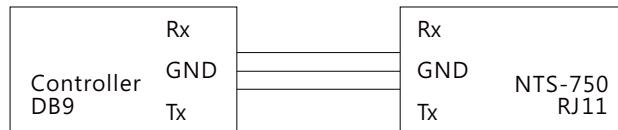

The 12V setting is Shutdown Volt+0.5V, the 24V setting is Shutdown Volt+1V, and the 48V setting is Shutdown Volt+2V.

If the UVP Transfer Voltage is set  $\geq$  the OVP Transfer voltage, the OVP Transfer voltage is set as follows:  
 12V setpoint is UVP Transfer Voltage +0.5V, 24V setpoint is UVP Transfer Voltage +1V, The 48V setting is UVP Transfer Voltage +2V.

#### 5.4.2 Communication Practices

Examples of RS-232/UART communications are provided below

1. Connect PIN3, PIN5, and PIN2 of the back-end controller DB9 to Rx(PIN2),GND(PIN3), and Tx(PIN4) of the RJ11 communication terminals of the NTS-750-248UN.
2. The communication entity layer is set as follows:

Control	Setting
Baud Rate	9600
Data Bits	8
Stop Bit	1
Parity	None
Flow Control	None

#### 3. Q Instruction transmission

The NTS-750-248UN model is used as an example to read the inverter status request instructions: 51 0D

Return instruction: 28 32 33 30 20 30 32 35 20 34 38 2E 33 20 30 37 35 20 32 30 2E 30 20 30 30 20 35 30 2E 30 20 30 30 30 20 30 32 33 20 31 30 30 30 30 30 30 30 30 30 30 30 30 30 30 30 29 0D

Request instruction interpretation:

Digit position	0	1

)	End mark
)	End of return

#### 4. C Instruction transmission

The NTS-750-248UN model is used as an example to perform the remote shutdown command.

Request instruction : 43 31 30 0D

Return instruction : 43

Request instruction interpretation :

Digit position	0	1	2	3-15	16
Return instruction	43	31	30	30	0D
Function	C instruction confirmation	Shut down	Turn on INVERTER	No special functions, reserved for other locations	End mark
Explain	C instruction write	Shutdown instruction on	Power-on instruction off		End of instruction

Return instructions explained :

Digit position	0
Return instruction	43
Function	C command return
Explain	C instruction in effect

#### 5. V instruction transmission

In the example of NTS-750-248UN, the output frequency is changed to 60Hz.

( 1 ) First unlock with the pu command

Input instruction : 70 55 0D

No return

( 2 ) Input instruction : 56 32 33 30 20 30 36 30 01 A1 0D

Return instruction : 23 32 33 30 20 30 36 30 01 6E 0D

Input instruction interpretation:

Digit position	0	1-3	4	5-7	8-9	10
Return instruction	56	32 33 30	20	30 36 30	01 A1	0D
Function	V instruction confirmation	Output voltage setting	Spacing	Frequency setting	Check	End mark
Explain	V instruction write	230V	Spacing	60Hz	Check bit	End of instruction

### Output instruction interpretation :

Digit position	0	1-3	4	5-7	8-9	10
Return instruction	23	32 33 30	20	30 36 30	01 6E	0D
Function	(	Output voltage reading	Spacing	Frequency reading	Check	End mark
Explain	(	230V	Spacing	60Hz	Check bit	End of instruction

### 6. Instruction transmission

Take NTS-750-248UN model as an example to read inverter information.

Request instruction : 49 0D

Return instruction : 23 03 00 05 30 30 2E 30 20 30 30 2E 30 20 34 34 2E

Check	end mark
Check bit	End of instruction

For the W return instruction, refer to the I return instruction.

## 8 U instruction transmission

In the example of NTU-1700-148UN . The U command reads the inverter battery UVP and OVP voltage switching points ( Before using the U command, you need to set the Battery First Flag to 1 via the W command, or operate the DIP SW to enable the battery priority function )

request instructions : 55 0D

Return instruction : 23 34 34 2E 30 20 35 37 2E 36 20 30 30 2E 30 05 51 0D

Request instruction interpretation :

Digit position	0	1
Return instruction	55	0D
Function	U instruction confirmation	End mark
Explain	U instruction write	End of instruction

### Return instructions explained :

Return instruction : 23 34 34 2E 30 20 35 37 2E 36 20 30 30 2E 30 05 51 0D

## 5.5 UPS Mode(only for NTU series)

### 5.5.1 Explanation of UPS mode

T1: When the user turns on the NTU, if the mains voltage is normal, the NTU will enter the bypass mode, and the mains voltage will supply the load. At this time, the battery is fully charged.

T2: If the mains voltage momentarily fails to supply AC output or the mains voltage momentarily exceeds the range of  $\pm 16\%$  of the NTU set output, NTU will immediately switch to inverter mode so that the customer's equipment will not have blackout phenomenon due to the instability of the mains voltage. Take the NTU-1200-124 (the preset output voltage is 110Vac) as an example: When the mains voltage is greater than 127.6Vac or less than 92.4Vac, the NTU-1200-124 will enter the inverter mode for power supply, at which time the battery begins to provide energy to the inverter to achieve backup function.

T3: If the mains has returned to normal or the mains voltage is within the range of  $\pm 13\%$  of the NTU set output, the NTU will switch to Bypass mode again, and the mains will supply power to the load, at which time the battery can be charged through an external charger.

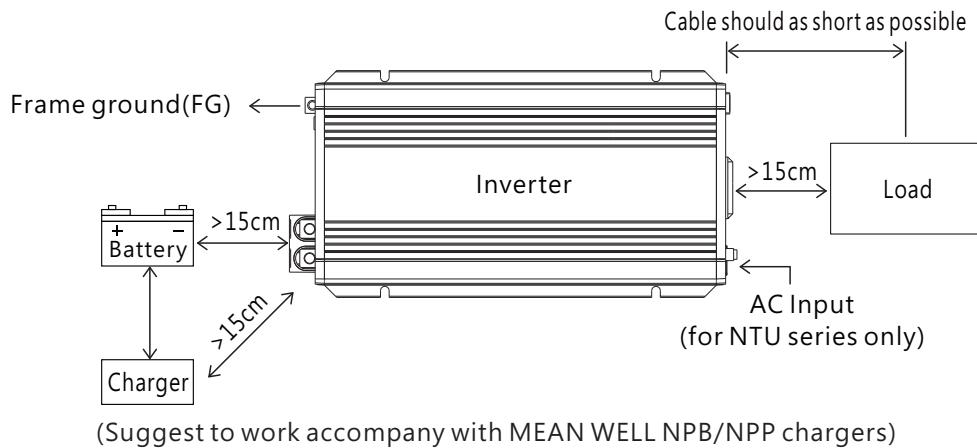

T4: When the battery string voltage is consumed to the lower limit of the inverter output voltage, and the power is off. At this time, the external battery charger cannot provide energy, so the inverter will continue to act to guide the battery voltage below the lower limit of the operating voltage.

T5: When the external battery voltage is restored due to the mains and the external charger charges the battery voltage to the operating voltage of the inverter, the inverter automatically restarts and operates.

T6: When the NTU-1700 series or higher power models work in Bypass mode, and the mains supply power to the load end, connect the inverter to the battery string to start fan heating.

### 5.5.2 UPS mode configuration reference figure

NTU-1200/1700/2200/3200 must be used with the charger to maintain the working quality of the UPS mode. When the NTU works in Bypass mode, the charger ensures that the battery voltage can provide sufficient power for the inverter mode when the mains is abnormal. When the mains returns to normal work from the abnormal state, the charger can also make up for the power lost in the inverter mode. When connecting the charger, select the wire with the appropriate diameter according to the output current to connect the battery and the inverter. For details, see Table 3-1 Cable Usage suggestions

## 6. Protections and Failure Correction

### 6.1 Protection Function:

#### AC Output Protection :

- AC Output Over Load Protection :

When overloaded, the inverter is able to supply power for a period of time. If the load does not drop back to the normal range, the OLP will be triggered and turn off the inverter. Once the OLP condition is removed, re-power on the inverter to start operation again.

- AC Output Short Circuit Protection :

When short-circuit occurs or the load increasing significantly, the inverter will turn off for protection. After removing the fault condition, re-power on the inverter to start operation.

#### DC Input Protection :

- DC Polarity Protection :

When connecting the DC polarity reversely, the internal fuse will blow for protection. The unit then must return to MEAN WELL's distributor for further support.

- Low DC Input Protection :

When DC input is lower than the operating range, inverter will turn off automatically for protection.

- Over Voltage of DC Input :

When the voltage of DC input over the operating range, the inverter will turn off for protection. After the fault condition is removed, inverter will restart automatically. If the inverter cannot operate normally afterwards, it represents that the inverter is damaged. Please return the unit to MEAN WELL's distributor if needed.

#### Inverter Protection :

- Over temperature protection(OTP) :

When the temperature inside the inverter raise to a certain level, the inverter will turn off for protection. After the temperate dropped back to operating range, re-power the inverter for operation.

### 6.2 Failure Correction

Once failure condition occurs, the LED on panel of inverter will show different LED light for indication. Fault condition can be separated into 4 categories, AC output protection, DC input protection, over temperature protection or other. Please refer to the following table for fault indication and correction. If the fault condition cannot be solved, please contact MEAN WELL's distributor for further assistance.

fault signal	Possible cause	Suggestions for Fault correction
Status ● DC Input ○ Load ☀	Over load protection	Check if the load requires high startup current, such as inductive or capacitance loads. After the fault condition is removed, re-power the inverter for operation.
	Short circuit protection	Check if the load requirement exceed the rated value or if the circuit is shorted.
Status ● DC Input ☀ Load ○	Aged battery or malfunction	Change a new battery
	Wrong battery capacitance	Re check if the parameter of battery suits inverter's operating parameter
Status ● DC Input ☀ Load ☀	Over temperature protection	Remove subject away from venthole if any. If it's due to high ambient, please lower the temperate or load to proceed. After the fault condition is remove, re-power inverter for operation.
	Other fault condition that's not defined	Contact MEAN WELL's distributor

Note: ● Light

Flash

Light off

## 7.Warranty

This product provide three years warranty under normal usage. Do not replace parts or any form of modification to the product in order to keep the warranty effectively.

※ MEAN WELL posses the right to adjust the content of this manual. Please refer to the latest version of our manual on our website. <https://www.meanwell.com>
